

Wed, 05 Dec 2018 15:41:00 GMT collisional transport in magnetized plasmas pdf - Plasma (from Ancient Greek  $\piλάσμα$ , meaning 'moldable substance') is one of the four fundamental states of matter, and was first described by chemist Irving Langmuir in the 1920s. Plasma can be artificially generated by heating or subjecting a neutral gas to a strong electromagnetic field to the point where an ionised gaseous substance becomes increasingly electrically conductive, and ... Sat, 08 Dec 2018 09:40:00 GMT Plasma (physics) - Wikipedia - A double layer is a structure in a plasma consisting of two parallel layers of opposite electrical charge. The sheets of charge, which are not necessarily planar, produce localised excursions of electric potential, resulting in a relatively strong electric field between the layers and weaker but more extensive compensating fields outside, which restore the global potential. Double layer (plasma physics) - Wikipedia - Electric Field Induced Permanent Superconductivity in Layered Metal Nitride Chlorides HfNCl and ZrNCl. Shuai Zhang, Mo-Ran Gao, Huan-Yan Fu, Xin-Min Wang, Zhi-An Ren, Gen-Fu Chen Chin. Phys. Lett. -
