aluminium alloy, with zinc
as the primary alloying
element. It is strong, with a
strength comparable to
many steels, and has good
fatigue strength and average
machinability. It has lower
resistance to corrosion than
many other aluminium
alloys, but has significantly
better corrosion resistance
than the 2000 alloys. Fri, 07

In the UK,

the National Annex allows either approach to be used. However, in almost all persistent design situations the use of the second method (the use of expressions 6.10a and 6.10b) will produce lower design values of the effects of actions (and for buildings, 6.10b usually gives the governing value).
